

**In the Specification:**

Please amend the specification at page 15, lines 18-24 as follows:

In order to generate such pulses 31, or rather in general a control signal, according to FIG. 11 a voltage-to-frequency converter 33 is used, to the input 34 of which an electrical signal coming from an amplifier or similar useful signal circuit, not shown, is supplied, which reflects the desired sound signal (or optionally a control signal for metering medium volumes to be transported). Connected to the voltage-to-frequency converter 33 is an electrode control unit 35 with a pulse shaper and a shift register, which then activates or excites the diaphragm 5 or generally the device 1.
